

TOPIC: In Basket

What we do today: Current state messaging, result review, co-signature and documentation completion workflows vary by area and their respective legacy systems.

What will change with Epic: In basket is Epic's secure messaging and task management system. This activity will become the cornerstone of provider workflows in Epic. It's used to support several activities including messaging, co-signatures, result review, and completion of documentation. Providers are encouraged to check their in baskets whenever they have downtime.

Why the change is necessary: In basket functionality is inherent to Epic workflows. It will help drive compliance, patient care, and communication if used correctly.

Where to find more information: View our [In Basket for Providers](#) document. For more information go to <http://www.southshorehealth.org/epic>.
