

TOPIC: Integrated Reading Workflow

What we do today: Today, when a study is launched in PACS, Powerscribe simultaneously launches, but MEDITECH does not. If a radiologist needs to view patient information within MEDITECH, a manual patient look-up must be completed.

What will change with Epic: On July 1st, when a study is launched in PACS, Powerscribe will simultaneously launch in the forefront, with Epic also launching in the background.

Why the change is necessary: The launching of Epic alleviates the need for a radiologist to manually search for the patient.
