

TOPIC: Therapy Charging

What we do today:

- Outpatient Rehab – Documentation for patients occurs in “Raintree.” This documentation generates charges, they are reviewed, and then posted in Meditech for billing.
- Inpatient Rehab – Documentation occurs in Meditech. Charges are generated from documentation and from a second function in Meditech. Both are reviewed and then posted.
- All Areas – Based on charges entered, staff may need to enter the following:
 - G-codes and appropriate modifiers
 - KX modifier
 - 59 modifier

What will change with Epic: All Outpatient and Inpatient documentation will occur in Epic. Documentation will then be reviewed and charges selected, then posted for billing.

Why the change is necessary: The new EMR will allow for a consistent process for documentation and charging with all patients across all rehab areas.

Where to find more information: Review and reference the Rehab Staff Department Minutes which will contain guidelines and tips for the Rehab charge process.
